

Novosyn[®] Quick

Your fast and efficient solution for a better quality of life

Fast absorbable braided and coated suture made of Polyglactin 910*

Sutures

* Novosyn[®] Quick is a suture material produced from a copolymer composed of 90% glycolide and 10% L-lactide

Novosyn[®] Quick

Fast absorbable braided and coated suture made of Polyglactin 910*

Your fast and efficient solution for a better quality of life

Are you looking for a FAST absorbable
braided suture with an outstanding strength,
knotting and handling?

Do you want to offer comfort to your
patient with no need of suture removal?

* Novosyn[®] Quick is a suture material produced from a copolymer composed of 90% glycolide and 10% L-lactide

- Fast degradation profile for a most convenient patient follow up without need of suture removal. Approximately 50 % of the initial tensile strength remains in day 5 and starts to fall off in days 7-10¹
- High tensile strength^{2,3} to assure a precise soft tissue approximation for a 7-10 days wound healing process, and good knotting performance³

- Significant flexibility^{3,4} and suture coating for a good handling of the suture and patient comfort
- Full needle range offer and pre-manufactured needle-thread combinations for special indications: Episio-Set

Think confidence, Think B. Braun

Novosyn® Quick

Fast absorbable braided and coated suture made of Polyglactin 910

Novosyn® Quick is a Polyglactin 910 braided suture with fast degradation profile.

It is intended for use in soft tissue approximation when only short term wound support is required and when the rapid absorption of the suture would be beneficial.

The main indications are:

- Episiotomy repair
- Skin closure

Main indication: Episiotomy repair

Episiotomy incision is still considered a controversial procedure⁵. The overall rates of episiotomy in different countries range from 8% in the Netherlands, 14% in England, 50% in the USA to 99% in the Eastern European Countries.⁶

Long-term complications after episiotomy repair are common. A large proportion of women suffer short-term perineal pain and up to 20% have longer problems as dyspareunia.⁵

Complications depend upon the severity of perineal trauma and on the effectiveness of treatment. The type of suturing material, the technique of repair and the skill of the surgeon are the main three factors that influence the outcome of perineal repair.⁶

Committed to the patient and health care professionals

Patient safety and comfort

The use of a more rapidly absorbed form of polyglactin 910 for repair of perineal trauma is associated with a significant reduction in pain and also with no need of suture removal, when comparing with the standard absorbable synthetic material.⁶

Health care professional confidence

There is a recommendation that a short term synthetic absorbable suture is a preferential material for all three layers in an episiotomy repair. The most recommended suturing technique is a loose continuous non-locking technique with two knots (at the beginning and at the end).⁵

Gold standard technique^{3,5}: continuous suturing for the 3 layers: vaginal tissue, perineal muscle and skin

Continuous suturing

Novosyn® Quick

Strong as always with a fast degradation profile

Fast degradation profile

The lower molecular weight of this polymer provides **Novosyn® Quick** a rapid absorption by hydrolysis. The suture falls off 7-10 days after the surgery or can be wiped off with sterile gauze if is needed.

Fast degradation profile¹

Novosyn® Quick:
same performance as the market reference.

Knot pull tensile strength

The high initial tensile strength of the Polyglactin 910 provides the needed critical wound support for an undisturbed tissue healing.

Knot pull tensile strength comparison^{2,a)}

- a) Four sample t test for Novosyn Quick vs. Vicryl Rapide size 2-0 suggests P value=0,023; for Novosyn Quick vs. Vicryl Rapide size 3-0 suggests P value=0,251 and for Novosyn Quick vs. Vicryl Rapide sizes 4/0 and 5/0 the tests suggests P value=0,000. If the p-value is greater than .05, the result is not statistically significant.

Short-term absorbable suture

Approx. 50% tensile strength retention after 5 days
Approx. 0% tensile strength retention after 14 days
Complete mass absorption in approx. 42 days

Novosyn® Quick:
similar performance as the market reference.

High smoothness and good handling for a better care

Suture smoothness surface

Novosyn® Quick has a very smooth surface thanks to its glycolide and L-lactide and calcium stearate coating. This helps to reduce the risk of tissue trauma and provides comfort to the patient.

Novosyn® Quick USP 2

Novosyn® Quick USP 2

Flexibility suture performance⁴

The high flexibility and pliability values of **Novosyn® Quick** thread allows a very good handling properties.

Novosyn® Quick:
better flexibility performance than the market reference.

Flexibility comparison^{4,b)}

b) Four sample T-test for Novosyn Quick vs. Vicryl Rapide size 2/0 suggests P value=0,012; for Novosyn Quick vs. Vicryl Rapide size 3-0 suggests P value=0,338; for Novosyn Quick vs. Vicryl Rapide size 4-0 suggests P value < 0.001 and for 5/0 the tests suggests P value=0,015. If the p-value is equal to or smaller than .05, the result is statistically significant.

Novosyn® Quick

Quality, confidence and trust

Blinded comparative evaluation

A blinded test was done with surgeons coming from different medical specialties such as Gynecology, Obstetric, Plastic surgery and Ophthalmology, as they represented the main clinical indications for a fast absorbable braided suture.

The surgeon was asked to make 2-3 stitches and perform the knots as they normally do in their daily practice.

The surgeon was asked to evaluate different aspects of the suture performance for each product by using a scale from 1 to 5 (1 = worst, 5 = best).

Blinded comparative evaluation³

Suture performance evaluation	Novosyn® Quick	Vicryl Rapide™*	Velosorb™* Fast
Suture drag	✓	✓	✓
Suture strength	✓	✓	✓
First throw hold	✓	✓	✓
Knot run down	✓	✓	✓
Knot security	✓	✓	✓

Suture handling	✓	✓	✓

- Vicryl Rapide™* and Velosorb™* Fast were tested in this blinded test in comparison with Novosyn® Quick.
- The product samples tested were USP 2/0, USP 3/0, USP 4/0 and USP 5/0. 14 different product lots were used.

Novosyn® Quick: suture knotting, handling and overall performance similar to the other fast absorbable braided sutures in the market.

B. Braun top needle range

Quality and high performance

- B. Braun needles have gained recognition over the years for their quality and high performance.

Constant development

- B. Braun has state of the art technology and is committed to constant research and development in order to improve needle requirements to the need of all surgical disciplines.

Easyslide needles

Are made of 300 series stainless steel to provide **superior bending resistance** and ductility as well as an **improved needle penetration** thanks to its geometry, surface treatment and silicone coating.

Novosyn® Quick

Product Features

Novosyn® Quick

*Your fast and efficient
solution for a better
quality of life*

Product Features

Structure	Multifilament
Chemical composition	Polyglactin 910
Colour	Undyed
Coating	Polyglactin 370 + calcium stearate
Size	USP 2 (metric 5) – USP 6/0 (metric 0.7)
Tensile strength retention	Approx. 50% tensile strength retention after 5 days Approx. 0% tensile strength retention after 14 days
Mass absorption	Hydrolysis, complete mass absorption in approx. 42 days
Indication	Soft tissue approximation when only short term wound support is required and when the rapid absorption of the suture would be beneficial: skin closure, particularly in paediatric surgery, episiotomies, circumcisions and closure of oral mucosa. Novosyn® Quick can also be used for conjunctival suturing and periorcular skin closure in ophthalmic surgery.
Sterilization & Degradation	Gamma irradiation

IMPORTANT: Please refer to the package insert for complete instructions, contraindication, warnings and precautions.™ and ™™ Trademarks of its respective owners. Other brands are trademarks of B. Braun company. © 2015 B. Braun.

B. Braun is one of the world's leading healthcare supplier with different production facilities all over Europe. Novosyn® Quick is produced at our Centre of Excellence for Closure Technologies in Spain where B. Braun aims to satisfy the highest quality demands, ensured by a finely tuned integral quality and environment management system.
